

FishPAC Connectivity Case Study Webinar

California Fish Passage Advisory Committee

Thursday, May 28, 2026 | 9-10:30 a.m. PDT
To register for the webinar, click [here](#)

The California Fish Passage Advisory Committee (FishPAC) is continuing its *Connectivity Case Study Webinar* series, featuring case studies that illustrate restoration projects that enhance habitat connectivity, particularly for salmon, steelhead, and other threatened and endangered (T&E) species. The next webinar will consist of two case study presentations plus time for questions and discussion. Although the case studies have a focus on T&E species, presenters may also include information about common species that benefit from each project.

The case studies and presenters include:

- **D1 Fish Creek – Fish & Wildlife Connectivity**
 - Laurel Osborn (District 1, Fish Passage Coordinator)
- **D4 Gleason Beach - Scotty Creek – Climate Adaptation & Fish Passage**
 - Caitlin de la Torre (District 4, Chief Environmental Compliance & Stewardship)
 - Lauren Ross (District 4, Biological Construction Compliance Branch Chief)

For more information about the FishPACs, visit cafishpac.org.

Pre-registration is required prior to attending the webinar on May 28
